(57) Abstract: In a telecommunications device a number or address is selected from a stored list for initiating a call or sending a message from the telecommunications device to the number or address. The list comprises names and one or more numbers and/or addresses corresponding to each name, and the method comprises the steps of displaying at least some of said stored names, and highlighting one of said displayed names. The method further comprises the step of displaying the highlighted name together with a default one of the one or more numbers and/or addresses corresponding to the highlighted name. In this way there is provided a method of making phone calls or sending messages with as few key presses as possible and which provides a consistent interaction design regardless whether one single or multiple numbers is/are entered for a given contact person.
